To The Parents of Our New Patients,

We would like to welcome you to our practice. Your interest and presence tells us that you realize the importance that good oral health plays in your child's well being. The primary goal of our doctors and staff is to make your child's experience at the dentist one that is both positive and pleasant.

We emphasize an early start to a child's dental experience beginning at one year of age or 6 months after the eruption of the first tooth. At this time, parents will receive instructions in proper oral hygiene techniques as well as preventative measures such as fluoride supplementation and diet counseling.

The philosophy of Pediatric Dentistry is that children are not just miniature adults but require an atmosphere and environment that is appropriate for their age and development. Our pediatric dentists are state board recognized specialists in children's dentistry. Our doctors have completed two-year specialty residencies following graduation from dental school. During their two-year post-doctoral training they obtained the necessary skills and techniques to successfully treat children from infancy through adolescence including children that are developmentally compromised.

Please complete the enclosed forms and return to our office in the provided envelope prior to your scheduled appointment. Please note that a parent or legal guardian must be present at the initial appointment.

Thank you for entrusting Pediatric Dentistry with your child's dental care. Please feel free to contact our staff with any concerns or questions you may have regarding your child's dental health.

Sincerely,

The Doctors and Staff of Pediatric Dentistry
